About the Program:
Form Instructions:

How to ensure the code you are submitting will work when we evaluate it

1. **The project can be submitted only once** inside the project submission portal.
2. Make sure you first validate your submission using **a validation Google form which we have provided inside the project submission portal.**
3. You shall receive an automated email after submitting the project file in the validation Google form in a couple of minutes. The validation Google Form can be used as many times as needed.
4. **Submit only if the project zip folder passes the validation check.**

Published using Google Docs Learn more

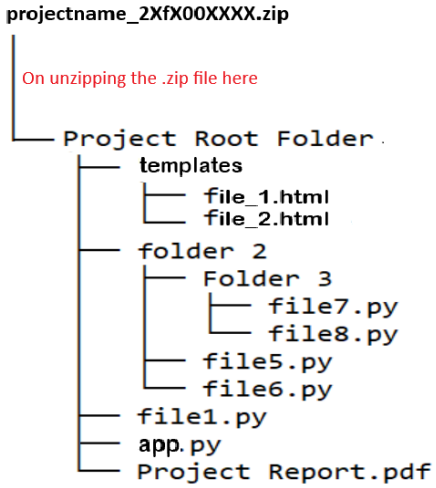

1. The project code must be submitted as a zip file.
2. The report must be submitted in a DOCX or PDF format
3. The video must not be more than 5-10 minutes in length

All of the above must be submitted in their respective fields only

Kindly note that there should not be any other file or folder in the root directory except the project folder.

A probable file tree structure is given below.

How we will evaluate your submitted project:

Step 1: Executing the submission.

Once we receive the submission, we will batch process the received submissions after the deadline, using an automated code, which will first unzip the folder, look for presence of the root folder and existence of a Python file.
If the submission has all the required files, it is considered **valid.**

Step 2: If the validation fails => U grade

If the folder cannot be unzipped or the root folder or .py file is missing, the submission will be reported

Published using Google Docs Learn more

directory other than the project folder.
- The files/folders of the application are not inside the project folder.
- Submission does not contain any '.py' file.
- The submission contains only PDF/text files.
- The compiler is unable to unzip your submission.
- Your submission contains corrupted files (files with unrecognized extensions).
- Any additional scenario where we are unable to process your submission.

Step 3: If the validation passes but fails the plagiarism test

If the submission passes validation, it goes through the plagiarism checker. If your submission is reported as failed by the plagiarism checker, we will inform you of this. If you wish to contest this, you can fill out the grievance redressal form and the internal grievance committee will review this.
If plagiarism is proven, you fail the project and you will be referred to the disciplinary committee of the institute for further action. **Further, this event will be added to your academic records, and IITM BS Degree program will not provide any support for internships/placements.**

Note: The grievance redressal form will only be provided to the student failing the plagiarism test through plagiarism checker, and NOT to those who have been marked to have done malpractice by your examiner.

Step 4: If your submission is valid and has passed the plagiarism checker

You will be eligible to attend Level-1 viva, where an assessment is done to check if the project conforms to the basic requirements given in the project statement and if the student has a basic understanding of the work submitted.

1. The students giving the level 1 viva must be able to run the project **within 10 min** after the verification of the checksum.
   Failing to do so will result in the student failing the viva without further evaluation.

2. In the initial part of the examination, the students will be asked some **descriptive questions and/or code-based questions** to test the authenticity of the work and understanding of the student in the work they submitted.
   If the student cannot answer these questions, the examiner will NOT proceed further with the evaluation and the student shall fail the exam.

3. The final part of the viva will include objective questions to check if the project conforms to the basic requirements given in the project statement
   This will be conducted by the IITM viva team.

MAD I Project Document - Jan 2026 Updated automatically every 5 minutes

Note: It is possible that due to the large number of submissions done by the student, the course team will provide a tentative "pass" for plagiarism to all the students. However, this should NOT be considered as final until your level 2 score is pushed onto the portal as it can be revoked in case it is flagged by the plagiarism checker or as malpractice by the L1 examiner. The course team will clearly notify when the tentative results are given.

Step 5a: If the student is eligible for L1 viva but does not book a slot => U grade

If the student who is eligible for level 1 viva but does not book a slot for level 1 will fail the project and **the case will be considered malpractice and shall be liable to all the punishment mentioned by DWC.**

Step 5b: If you fail Level 1 viva (marks < 16) => U grade

If a student fails level 1 viva by scoring less than 16 marks in their level 1 viva, they will fail the project and will have to redo the project in the next term.

Note: There is no provision for reattempt if the student fails Level 1 viva for any reason.

Step 5c: If you pass Level 1 viva (16 ≤ marks obtained < 28)

If a student scores between 16 and 27 (both inclusive), you will pass the project with a D or E grade and **there is no need for you to attempt the level 2 exam**. The grade distribution is given below

M = marks scored by the student in level 1

Marks Range	Grade provided
20 ≤ M < 28	D
16 ≤ M < 20	E
M < 16	Fail

Step 5c: If you pass Level 1 viva (marks obtained ≥ 28)

You will be eligible to attend the Level 2 viva. In this level, the assessment will be on the quality of the project work, the extent of your involvement, your ability to modify the code at various levels, your depth of understanding, and your understanding of the course in general. This level will be conducted by industry experts and course instructors.

Published using Google Docs Learn more

and **the case will be considered malpractice and shall be liable to all the punishment mentioned by DWC.**

Step 6b: If you fail Level 2 viva => U grade

If you do not pass Level 2, then you will fail the complete project and will get a U grade and will have to redo the complete project in the next term.
There **will not be a reattempt if you fail the level 2 viva.**

Step 6c: If you pass Level 2 viva

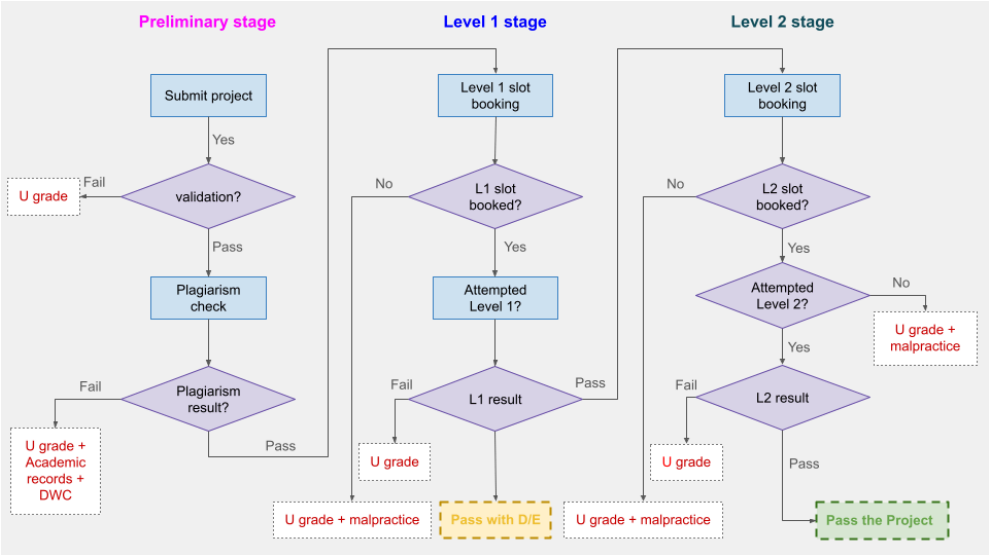

Once you successfully complete and pass Level 2 viva, your project course is completed, **subject to the clearance of plagiarism checks** with all the submissions made in that particular term.

Student behaving rudely with the examiner (level 1 or level 2) => U grade

At any stage, if a student is found to be misbehaving with the examiner or showing any kind of misconduct will straightaway be removed from the viva process and will get a U grade for that term.

Students are expected to maintain the decorum of the project spaces, discourse or while creating discrepancy if applicable.

MAD I Project Document - Jan 2026 Updated automatically every 5 minutes

- **Project Submission Deadline (before Sept 2025 Theory Completed/Passed):**
  - Tuesday, March 10th, 2026
- **Project Submission Deadline (Sept 2025 and Jan 2026 Theory):**
  - Friday, April 10th, 2026

Problem Statement:

The problem statement that students have to complete in the Jan 2026 term will be the one given below.
Placement Portal Application - V1
https://docs.google.com/document/d/e/2PACX-1vQd_uj2D-ONcKs0Wi9_ITkR5xLOHS1zlmfhaRy8jHtlVVgyNbq3AVspa9BZmerTK0WAZ8qffqU76Fe7

Important Additional Documents:

Students must go through the following documents to get additional assistance/information for the project.

1. The Git tracker document helps you to create an account on GitHub and the team can easily track your progress.

Note: Registration on Git Tracker is compulsory for all the students, which will serve as the 0th milestone for the project. Failing to do so before the deadline, the project will not be considered for evaluation.

2. A complete list of milestones to guide students in their project development process and help us track your project is given in the document attached below.

App Dev I Milestone doc - Placement Portal Application V1

3. The Viva preparation checklist document helps you with things to be kept in mind before the viva.

Submission Deadline:

Theory completed term	Submission date	Evaluation
May 2025 or previous term	March 10, 2026	100
Sep 2025	April 10, 2026	100
Jan 2026	April 10,2026	105 marks and cap it to 100

Published using Google Docs Learn more

Level 2 viva's:

A student's batch is determined based on the project submission window and is not predefined.

1. If you have completed/passed the theory **before the Sept 2025 term**, you must submit the project **by 10th March** and the viva will happen after 10th March.

2. If you have completed/passed the theory **in the Sept 2025 or Jan 2026 term**, you must submit the project **by 10th April** and the viva will happen after 10th April.

Only after submission within the applicable deadline will your batch be assigned.

To be added one week before the deadline of every submission window

Note: If there is an extension batch, we will update the deadline and the viva schedule later.

Dos AND Don'ts while attending the viva

- Keep a **soft copy of your ID card** ready to share at the start of the viva.

- **Check your mic, camera, and screen-sharing** beforehand — confirm with the viva observer.

- Keep your **code organized and easily accessible** for quick modifications during the viva.

- If using a **local setup**, ensure all **dependencies are pre-installed**; no installations should happen during the viva.

- Viva time should focus on **demonstration, project evaluation, and conceptual understanding**.

- **A viva slot** cannot be changed except for valid **medical or approved strong reasons** (with proof).

- Reasons like *"laptop not working"* or *"another exam"* are **not acceptable** for rescheduling.

- **Cancellation/rescheduling** due to your side incurs a **₹1000 fee** (examiner honorarium + processing).

Published using Google Docs Learn more

receive your final project grade.

- If your code is **flagged by the plagiarism checker**, **all similar submissions** will also be flagged — **all involved students shall face the same penalty**, regardless of who wrote it.
- **Do not upload** your project to **any public repository**.
- **Do not share** your code with others — even during discussions or through **files, screenshots, screen share, or any other medium**.
- Ensure that the **entire business logic is written by you**.
- You may refer to **official documentation** for configuration purposes, but **code snippets from external sources are not allowed**.
- Be prepared to **explain every part of your code** — including snippets from official documentation (know their purpose and impact).
- **Modifying variable or function names** in copied code does **not** make it original.
- **Adding irrelevant or unreachable code** to bypass plagiarism detection is **not acceptable** and will be treated as **plagiarism**.
- Changing the **sequence of code blocks** in copied code will still be **detected as plagiarism**.
- The **similarity threshold** and **minimum code length** for plagiarism checks will be **decided after submissions**; focus on building a **clean, original, working application**, not on beating the checker.
- **Do not get your code written by others** (friends, family, or acquaintances). Assistance is allowed only if you can **explain and modify** the code yourself during viva.
- **Use the same system** for the entire development and viva process; excuses like *"code was on another laptop"* will **not be accepted**.
- If you borrow an **idea** from an external source, you **must cite it**, but citation alone **does not justify copied or slightly modified code**.

Bootcamp Schedule (Jan Term 2026)

Mode	Bootcamp No.	Dates	Duration	Start Day	End Day
Online	1st	**15th Feb – 28th Feb**	14 days	Thursday	Wednesday
Online	2nd	**16th March – 29th March**	14 days	Tuesday	Monday
Offline	1st	**27th Feb – 7th March**	7 days	Wednesday	Tuesday
Offline	2nd	**17th March – 25th March**	7 days	Tuesday	Monday

How to choose?

- Prefer flexibility and remote learning? → Choose **Online Bootcamps**
- Want in-person interaction and hands-on sessions? → Go for **Offline Bootcamps**
- Can I join early? → Try the Feb sessions
- Need more time to plan? → Consider the March sessions

Offline Bootcamp Travel & Stay Guidelines

- Students attending **offline bootcamps** are allowed to:
    - **Arrive one day before** the bootcamp begins.
    - **Depart one day after** the bootcamp ends.
- **Extended stays are not permitted** beyond this window due to logistical and accommodation constraints.
- Please **plan your travel accordingly** and

Published using Google Docs Learn more

- **Registration Opens:** 1st Feb 2026
- **Registration Deadline:** 28th Feb 2026 (for before Sep'25 Term) & 31st March 2026 (for Sep'25 and Jan'26)
- **Project Submission Deadline:** 10th March 2026 (for before Sep'25 Term) & 10th April 2026 (for Sep'25 and Jan'26)

About the Program:

- This is **not an online bootcamp**. Registering for an online or offline bootcamp doesn't make you eligible for one to one mentorship, separate registration for one-on-one mentorship is required.
- Students will be assigned mentors within **2 working days** after payment confirmation.
- Mentorship will end after either:
  - **5 hours** of assistance, or
  - **10th March 2026 and 10th April 2026**, whichever is earlier.

Form Instructions:

- Learners must select their course correctly from the dropdown.
- Those selecting both courses will need to pay for both in the next step.

Please fill out the form carefully to receive one-on-one guidance from experienced mentors for your app dev projects.
